

## Klerwipe Sterile Dry Wipes

**Sterile low particulate and 100% polyester dry wipes available in different sizes and formats.**

### Advantages

#### ■ Suitable for cleanroom use

Double or triple bagged in a Grade C (ISO Class 7) cleanroom before gamma irradiation. Suitable for use in controlled environments such as isolators and laminar flow cabinets. All packaging is designed to minimise the generation of particles. The 138gsm dry wipes are triple bagged and each inner pack is individually labelled.

#### ■ Flexible application

Dry Sterile Klerwipes are particularly suitable for all cleaning and disinfection procedures. The amount of cleaning agent can be varied to suit the particular purpose.

#### ■ Cost effective

All Klerwipe sterile wipes are packed in small quantities to avoid the need to compromise the sterility of a pack, once opened. The wide range of different sizes means there is a wipe suitable for each application, thereby eliminating wastage of unused wipes.

#### ■ Highly absorbent

All Klerwipes are highly absorbent, making them useful both for applying cleaning solutions and disinfectants and to clean up spills.

#### ■ Suitable for direct product contact use

The wipes do not contain any chemical binders so do not leave undesirable residues.

## Description

The wipes are all packed and double or triple bagged in a Grade C (ISO Class 7) cleanroom before gamma irradiation at no less than 25kGy.

100% polyester wipes come in two formats, 115gsm and 138gsm circular knit polyester laser wipes which have sealed edges. Low particulate wipes are made from a 68gsm binder free, hydroentangled cellulose/polyester blend. Sponge wipes are particulate free and highly absorbent, made from non-abrasive polyurethane foam.

Also available are individually packed low particulate wipes, folded in an easy to open foil pack. 50 foil packs are then double bagged. The foil pack eliminates particulates when opening.

## Validation

Manufactured by a ISO 9001:2008, ISO 13485:2012 and European Medical Device Directive 93/42/EEC accredited company.

Certificates of irradiation with every batch.

3 year shelf life.
