

# Klerwipe<sup>®</sup>

## Klerwipe Sterile 100% Polyester Dry Wipe

Sterile knitted 138gsm 100% polyester wipes with ultrasonically sealed edges.

### Advantages

#### ■ Suitable for direct product contact use

The wipes are of particularly high quality, 138gsm laundered polyester with ultrasonically sealed edges. The laundering process significantly reduces the bioburden and particulates on the wipe.

The wipes do not contain any chemical binders, so no undesirable residues remain. This makes the Klerwipe Sterile 100% Polyester Dry Wipes particularly suitable for use on surfaces directly in contact with products, where residues and additional bioburden are unacceptable.

#### ■ Suitable for cleanroom use

Double bagged in a Grade C (ISO Class 7) cleanroom before gamma irradiation. Suitable for use in controlled environments such as isolators and laminar flow cabinets. All packaging is designed to minimise the generation of particles.

#### ■ Flexible application

Dry Sterile Klerwipes are particularly suitable for all cleaning and disinfection procedures. The amount of cleaning agent can be varied to suit the particular purpose.

#### ■ Cost effective

All Klerwipe sterile wipes are packed in small quantities to avoid the need to compromise the sterility of a pack once opened. The wide range of different sizes means there is a wipe suitable for each application, thereby eliminating wastage of unused wipes.

#### ■ Highly absorbent

All Klerwipes are highly absorbent, making them useful both for applying cleaning solutions, disinfectants and to clean up spills.

## Description

The 100% polyester wipes are 138gsm circular knit polyester with ultrasonically sealed edges with very low levels of releasable particles. They are packed and double bagged in a Grade C (ISO Class 7) cleanroom and irradiated using a validated process at no less than 25kGy.

The wipes are laundered in an ISO Class 4 cleanroom which is dedicated to the laundering of knitted polyester wipes. The wipes are washed and rinsed in deionised water, which has been treated by UV to eliminate any microbial contamination prior to being introduced into the washers. The wipes are then dried in tumble dryers fed with ULPA filtered air.

The laundering process produces a wipe with very low levels of particulate, less than 1.5 million 05 – 1.0 µm particles per m<sup>2</sup>.

Each pack contains 10 wipes so there is no wastage at the end of a manufacturing session. The polythene packaging features “Klertear” which makes it easy to open even when wearing gloves. The packaging itself does not generate any particles.

## Validation

Manufactured by an ISO 9001:2008, ISO 13485:2012 and European Medical Device Directive 93/42/EEC accredited company.

A combined certificate of conformity and irradiation is available with every batch.

3 year shelf life.
